

PRO GRADE FLEXIBLE LED STRIP CONNECTORS

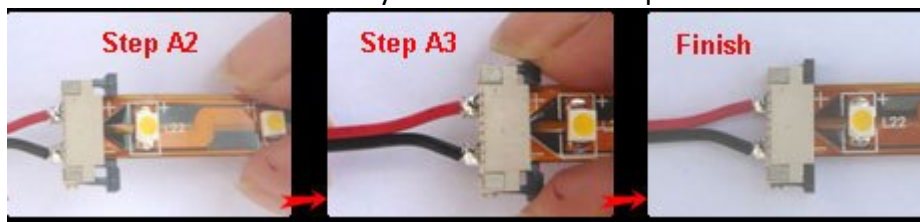

There is a top and bottom side of the connector wires. Red wire goes to (+). Black wire goes to (-). Reading Left to Right.

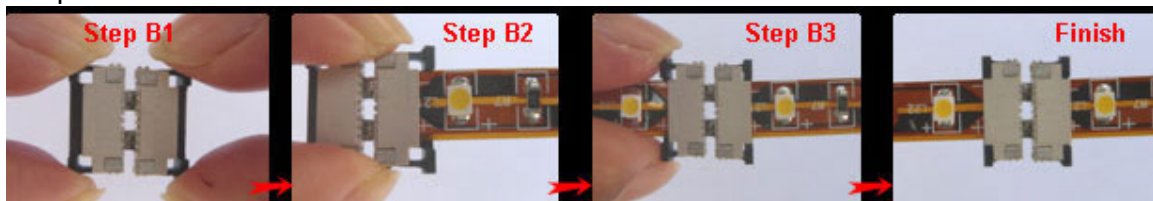

The Strip Wire Connector and the Strip Coupler are installed by sliding open the black clip section. Slip the Flexible LED Strip into the Connector or Coupler and make sure they are all the way in. Then slide the black clip closed.

Avoid unnecessary handling and twisting as the Strip can slip out of the Connector or Coupler. Secure Strips in place with the pre-attached self adhesive tape and that will hold the Connector or Coupler in place.

How to install connectors to your flexible LED strip

Couplers install in the same manner
