

Downlight Maximum Dimensions

The images shown below depict maximum dimensions for these lights. Heat sinks (which can be described as 'fins') vary in length. Some are denser and therefore, are shorter. For some models we have 3x3 downlights with heat sinks as compact as $1\frac{3}{4}$ to $2\frac{3}{8}$. This will decrease the installation depth needed accordingly. If you need help with a tight installation area, please contact us for assistance. Email Sales@TheLEDLight.com or call 1-775-841-4490. Thank you.
